LIQUID FORCE

LF kites are the real deal. Julien Fillion, designer of LF kites, is the real deal. Our international and national team riders, who test the kites day in and out, are the real deal. All Liquid Force kites are designed from sketchpad to computer screen. Needs, wants, concepts and necessities are all painstakingly processed, designed, tested and implemented to build superior kites that take riding to the next level.

RIDER: BRANDON SCHEID

RIDER: CHRIS BURKE

T9600
CANOPY

SUPERIOR QUALITY CANOPY MATERIAL
TEIJIN RIPSTOP T9600

When most of the kiteboarding brands out there stopped using this very high end material due to cost increases, we at Liquid Force stood our ground! We strongly believe that the use of Teijin Ripstop T9600 is essential to high quality kite design. Your kite will repeatedly perform like the day it was pulled out of the plastic and hold a much higher resale value.

BOMB PROOF CONSTRUCTION
GLUED AND STITCHED PANEL ASSEMBLY

The entire panel layout of our kites is glued and stitched using an overlapped seam assembly. This construction has proven throughout the years to be the strongest on the market. We have also discovered the perfect Dacron reinforcement to weight ratio to ensure the highest quality for your investment. Our signature molded EVA leading edge bumpers are light, strong and will protect your LE during self-launch, hard crashes, snow re-launch, and normal everyday wear and tear.

WINGTIPS
UNIQUE LF DIAMOND WINGTIP DESIGN

While most other kite designs on the market only use round wingtips, at Liquid force we believe in our unique Diamond Wingtip design. The Diamond wingtip not only provides huge de-power and easier prelaunch over traditional curved wingtips, but provides a rigid structure as well as instant and predictable kite response. The LF Diamond Wingtip also provides smooth, constant pull and power through turns while still effectively de-powering the kite when needed.

REINFORCED LEADING
EDGE STRUCTURE
DOUBLE LAYER LE
CONSTRUCTION

When crashing at full power, no other part of the kite absorbs as much impact as the leading edge, specifically the center of the leading edge. Our center leading edge segments are beefed up by doubling the amount of Dacron used in production, but only where it's truly needed. This will not increase the weight of the LE but will give your kite the ability to hit the water hard all day, worry free.

STRUTS
ANGLED JET STRUT ENDS DESIGN

Our angled Jet Struts prevent any of the bridles from getting stuck at the end of the strut during intensive water prelaunch. Reliability is the word!

USB 2.0

BRIDLES SYSTEM
USB 2.0 - ULTRA STABLE BRIDLE

A reliable bridle is a primary focus of kite design at Liquid Force. The LF USB 2.0 Bridle is a Proven LF cascade SLE bridle system with one static wingtip pulley. Instant depower, re-launch and stability is the #1 goal.

CPR CONTROL SYSTEM EQUIPPED
100% DEPOWER - CENTER LINE PUSH RELEASE

The LF CPR release allows riders an instant and effortless safety release of the kite, with either hand, from the front or back of the bar, to either the 100% de-power flag line or 90% de-power mainline leash options.

INFLATION SYSTEM
MAX FLOW INFLATION ONE PUMP.

The future is now, and this future is inflated quicker and easier by the LF Max Flow Valve. Imagine a kite that inflates in 30% less time, getting you to the water faster and leaving your friends still pumping on the beach. The LF Max Flow valve can bring it, and only the full range of LF kites has it! This new one way high airflow valve mixed with our completely redesigned, gauge-equipped pump will change your life. Once you go Max Flow, you never go back!

HAVOC

CALLED THE MAGICAL KITE BY MANY...

Producing sessions that dreams are made of is what the Havoc is all about. Over the years the Havoc has been a kite synonymous with speed, stability and versatility; the fifth generation differs none. The Havoc offers smooth, deliberate power and responsive direct turning that makes it a natural choice for everything from progressive freestyle and wake style to fast action wave riding. Lightning quick turning and smooth lift make this kite the answer for massive air, fast controlled loops and predictable placement in the wind window. The diamond wing tip and 2.0 bridal system allow for unsurpassed wind range and precise response for unhooked riding. No need to stress on dropping your kite while you push your limits; the Havoc's effortless rear line re-launch ability will have your kite in the air before you realize you've hit the water.

ENVY

BE THE ENVY OF THE RIDERS AT YOUR SPOT!

Rock solid stability, directional float, pivotal turning and effortless re-launch highlight the Envy’s “beyond delta” design for all around performance. This ultra lightweight three-strut platform gives light, responsive bar feel with impulse pivotal turning. The Envy’s flight characteristics blend to produce a distinct “set it and forget it” feel. This makes it the perfect kite for everything from progressive wave riding to kite low freestyle domination. Land a jump a bit too hot, under run the kite in a bottom turn... forget about it! The Envy’s lightweight design allows the kite to float directionally, enabling you to forget about the kite and concentrate on the important issues: making grabs, spotting landings and reading the wave for perfect down the line performance.

CPR CONTROL SYSTEM

The LF CPR system allows an instant and effortless safety release of the kite, with either the left or the right hand, from the front or back of the bar. Once engaged, the bar will release from the chicken loop to either the 100% de-power flag line or 90% de-power main line leash options. While the primary focus for this new system was on safety and release advancements, the entire bar has been redesigned and improved. Julien Fillion teamed up with industrial designer Miles Hammond to create the new CPR, the most advanced, easy to use and reliable control bar and safety system in kiteboarding.

100% DE-POWER FLAG LINE

The LF CPR Control System has a 100% De-power flag line leash attachment option. When attaching the leash to the flag line and releasing the bar via CPR (or simply letting go) the kite will completely de-power and fall to the water. This will leave the kite connected to only one front line, and allow the rider to work their way back to the bar, reset the CPR if engaged, and either prelaunch the kite or wrap it up for another session.

90% DE-POWER OPTION

To utilize the 90% de-power leash attachment setting, attach your leash to the end of the mainline. This set-up will allow the rider to safely and repeatedly de-power and disable their kite while still allowing the rider to re-launch and ride again very quickly. Kite remains flying on two front lines and will drift to either corner of the wind window, readying itself for prelaunch.

CENTER LINE PUSH RELEASE

The LF CPR Release is designed for ultimate safety and simplicity, allowing a rider to release the kite with either hand, from the front or back of the bar, always the same, either side, and at any time!

AUTO INDEXED CHICKEN LOOP

This allows a stiff and constant alignment of the chicken loop to the bar when unhooking/hooks back in. The chicken loop does not flop around and is always aligned correctly with the bar. No need to look to unhook or re-hook!

NON-MECHANICAL 100% MOLDED DESIGN

The LF CPR is unique in that it has NO MECHANICAL or METAL Parts. Each of the quick release parts are molded plastic and will not rust, seize or corrode and will always function properly in sand, salt, heat or snow.

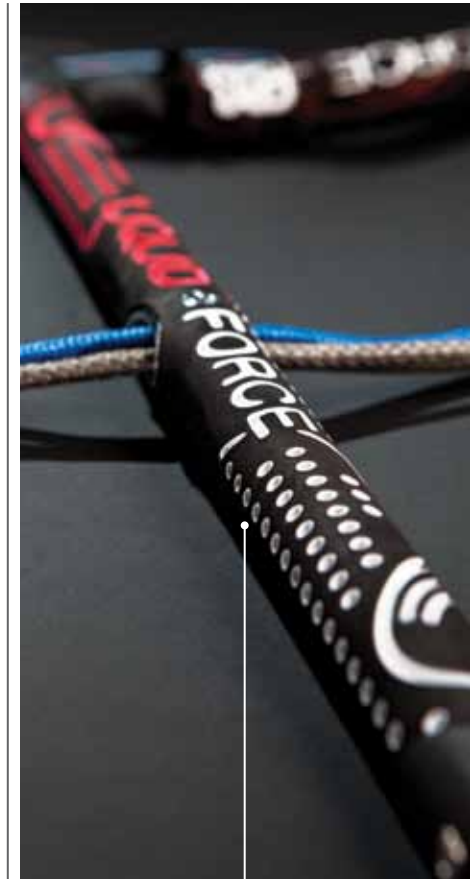

BELOW THE BAR DE-POWER CLEAT

The power adjustment mainline runs through a 3D-Molded cleat, molded directly into the CPR Chicken Loop. This cleat allows effortless adjustment of the mainline and an extreme amount of de-power, always within reach below the bar, molded cleanly right into the chicken loop surface.

QUICK CLICK CPR RELEASE RESET

The CPR Release is designed to be just as easy and reliable to reset as to release, even from the water. The CPR resets simply by snapping the chicken loop onto the mainline and then pulling the red release down until it clicks. Done!

COLOR CODED 3D MOLDED EVA GRIP

More comfortable than ever with bold color-coded grip. This bar grip is very easy to identify the right/left sides of the bar while flying and even when getting tumbled underwater. You always know which end of the bar to grab.

BOARDS

This is where it all started with Liquid Force. From the earliest days of the sport, we have been fully dedicated to producing superior performing kiteboards. We were the first to bring a production twin tip to kiteboarding and we will always stay close to this heritage. Liquid Force designer Jimmy Redmond has been at the forefront of wakeboard and kiteboard design for over two decades. His drive, passion and innovation have lead to industry changing concepts and constructions. And yes, we make our boards in our own factory! With this resource comes unmatched quality and performance to confidently put under your feet day after day, session after session.

LIQUID RAIL

This exclusive feature is the strongest and most durable rail on the market. The Liquid Rail creates a solid unity of the board's top and bottom sheets that withstand hard impacts protecting the board.

BOTTOM COUNTOUR

Every Liquid Force kiteboard uses unique bottom contours to assist in up wind performance, to water release for hard pop and soft landings.

LFX

The LFX, designed with input from Moehau Goold, is a board of many faces. The flex gradient core utilizes a finely tuned multi-stringer construction that smoothes out the chop yet is ready to load and pop on command. The LFX is shaped with defined bottom contour that helps track upwind but will release on hard fast landings and comes standard with a Bomb Proof base, the hardest most durable base material in the industry; a base that laughs in the face of rocky launches, ghetto sliders, buoy jibs and the occasional toss into the back of a pickup truck.

DLX

And you thought it could not get any better. Hyper pop and ultra lively. The DLX has emerged from the collaborative work of the lord of wake style, Maurico Arbreu. A wood / composite multi stringer core that is milled and tuned to perfection for a blend of torsional and centered flex produces a hard biting edge, smooth transitional pop and clean release off the water. Shaped with channeled bottom contour for added upwind bite and focused water flow.

BLISS

Flex, Shape and feel tailored specifically to female riders. Not just a glittered up beginner board, the Bliss has been tested and perfected by demanding girls who always ride with the big boys.

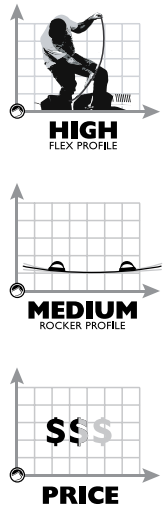

FREESTYLE ★★★★★ | FREERIDE ★★★★★ | PARK ★★★★★ | WAVE ★★★★★

129x40

134x40.5

CONTACT

The Contact is an easy and forgiving board in all conditions. A continuous rocker line and a proven single concave bottom contour helps this board get onto a plane fast and rocket upwind. The composite molded core gives the Contact a smooth absorbing flex pattern rounding out the all around performance of this board.

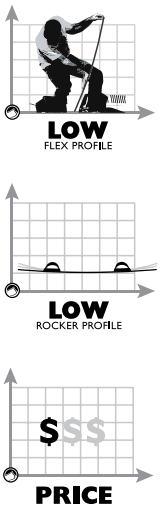

FREESTYLE ★★★★★ | FREERIDE ★★★★★ | PARK ★★★★★ | WAVE ★★★★★

134x40

137x41

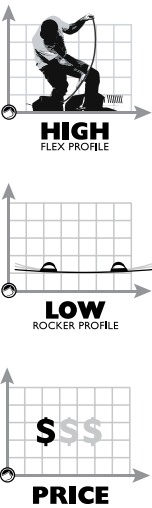

TANTRUM

The Tantrum brings the proven outline and construction of the Contact into a smaller package for lightweight riders and kids who are ready to ride. Smaller size and softer flex makes for easy riding and effortless take offs and landings while jumping. Don't think for a second performance has been sacrificed. The Tantrum has a precise rocker and bottom contour to rail upwind with ease and smoothly release in the transitions.

FREESTYLE ★★★★★ | FREERIDE ★★★★★
PARK ★★★★★ | WAVE ★★★★★

133x41

EDGE

From the first time you get on a board with a kite to air transitions you are guaranteed good times with the Edge. The Edge uses an Asymmetrical bottom contour pushed slightly closer to the heel side edge to make it easy to find your sweet spot for upwind mastery. Combine this with a rounded toe side edge and hang-up in the chop is eliminated. A confidence building board that will take you beyond mowing the lawn to hard carves and lofty airs.

TWIN SKIM

Not quite a skim and not quite a skate, the LF Twin Skim gives the ultimate in versatility on a strapless, no fin platform. Use the wider tail under your back foot to perfect everything skate, from ollies to big spins, and then on the same tack flip the board around to use the narrow tail for some serious slashing and carving in the waves or swell. Whatever your strapless desires, the LFTwin Skim can take you there.

51x20

SEQUENCE

Completely redesigned, the Sequence is a collaboration of the LF Wakeskate division and the kiteboarding team to create a board that fuses both worlds together. The Sequence continuous rocker and outline allows kites to enjoy cruising upwind without jeopardizing pop. Our wood construction has been modified to have the perfect weight ratio specific for kiteboarding. The Sequence is the only board made by a real wakeskate company with input from the godfather of KITEskating Mauricio Abreu.

120

KITE FISH

Take the efficiency of a skimboard, add the tracking of a surfboard and divide by the value of LF's capped construction, and what do you get, Bueler? The answer can only be the legendary LF Kite Fish. If you've been plagued by the potential of small, mushy surf or deep river swell, and just haven't found the right stick to make it worth pumping up, the Kite Fish is for you. Incorporating a fuller nose and a wide outline, the kite fish excels in light wind yet drives down the line when the surf picks up. A twin plus trailer fin setup adds the potential to switch from twin to thruster fin setups.

5' 3"

ALLIANCE

Liquid Force has enlisted the master experience of snowboard guru Sheldon Decosse to produce a snowboard that is specific for the unique demands of snowkitng. The Alliance is completely designed form the base up to allow efficient straight-line edging to smooth arced turns. This is the perfect board for under a kite.

- Shallow centered edge radius allowing the board to track efficiently upwind, while still providing edge to edge energy transfer for descents.
- Centered flex profile that is stiff under foot, soft in the tip and tail for feel, float and pop.
- Wood / composite core that allows for a finely tuned flex pattern while retaining a torsional rigidity.

KITE HARNESS

RIDER: CHRIS BURKE

COMP

The COMP harness is Liquid Force's complete 3D Thermoformed Harness. All new for 2011, the LF COMP Harness is built light with a superior flex and low profile outline that make this one of the lightest and tightest waist harnesses available. Throw in an EVA 'Body Wrap' Liner and it makes the LF COMP conform to the body for that 'like a glove' fit.

COMP FEATURES:

- 3D thermo formed providing lightweight and comfortable ridged event when wet.
- EVA molded body wrap liner providing even pressure disbursement and eliminates twisting.
- Worlds first pre-curved EVA molded spreader bar pad, giving superior comfort and support while preventing uncomfortable spreader bar chest friction.
- The Ultra Flex shape and design to help unify the harness and the body into a one
- Low profile outline designed to sit perfectly in the lower back position
- Liquid Force Rash Guard Technology, extra soft neoprene panels in the hip contact points that prevent chafe.
- Quick release leash. Another Liquid Force original feature. This feature allows the riders to separate themselves from the kite leash if needed from either side of the leash attachment harness connections.
- COMP leash setup included with the harness.
- Removable Spreader bar hold down strap that keeps the spreader bar in place for freestyle and hang time comfort.
- Spreader bar Quick clip allows rapid entry and removal of the harness.
- Effortless strap adjustment geometry for easy single hand tightening adjustment of the spreader bar, even when riding.
- If you are one of those riders who get to rip everyday are hard on your gear, LF as your back with included replaceable spreader bar straps.
- Key bungee and pocket to keep your car or fin key secure at all times.

LUXURY

One of the most popular and comfortable harnesses in kiteboarding, the LF Luxury just keeps getting better and better! For 2010 LF has integrated a new 3D Thermoformed core, providing a controlled flex that distributes loads evenly and remains lightweight, even when wet. A new quilted liner and chafe resistant rash guard areas increase overall comfort and feel.

LUXURY FEATURES:

- 3D thermo formed providing lightweight and comfortable ridged event when wet.
- Intergraded pre-curved ergonomic spreader bar pad. This LF original feature provides superior comfort and support.
- Diamond quilted neoprene body wrap liner preventing twist in the harness for a luxurious fit and ultimate support.
- Liquid Force Rash Guard Technology, extra soft neoprene panels in the hip contact points that prevent chafe.
- Controlled Flex design that disperses the pull of the spreader bar throughout the entire harness.
- Mid profile outline designed to fit and sit perfectly in lower back position yet provide wider back platform for long session comfort.
- Removable Spreader bar hold down strap that keeps the spreader bar in place for freestyle and hang time comfort.
- Spreader bar Quick clip allows rapid entry and removal of the harness.
- Effortless strap adjustment geometry for easy single hand tightening adjustment of the spreader bar, even when riding.
- If you are one of those riders who get to rip everyday are hard on your gear, LF as your back with included replaceable spreader bar straps.
- Key bungee and pocket to keep your car or fin key secure at all times.

BLISS

Gals, you have found nirvana!! The Bliss has been completely designed around female needs and wants in a harness. Light weight, curvy to stay in the right spot, and looks great!

BLISS FEATURES:

- High curve profile specifically designed to fit the contours of a woman's figure keeping the harness in place and providing superior support.
- Diamond quilted neoprene body wrap liner preventing twist in the harness for a luxurious fit and ultimate support.
- Controlled Flex design that disperses the pull of the spreader bar throughout the entire harness.
- Removable Spreader bar hold down strap that keeps the spreader bar in place for freestyle and hang time comfort.
- Integrated pre-curved ergonomic spreader bar pad. This LF original feature provides superior comfort and support.
- Spreader bar Quick clip allows rapid entry and removal of the harness.
- Effortless strap adjustment geometry for easy single hand tightening adjustment of the spreader bar, even when riding.
- If you are one of those riders who get to rip everyday are hard on your gear, LF as your back with included replaceable spreader bar straps.
- Key bungee and pocket to keep your car or fin key secure at all times.

COMP VEST

New for 2011!!! The Comp impact vest is the lightest most versatile vest on the market. Slimmed down low profile ergonomic flotation allowing complete freedom in movement and providing solid impact protection. The low profile shape makes the vest sit proper without riding up and integrate perfectly with both seat and waist harnesses. Another Liquid Force exclusive technology is the LF Inside Grip. This design feature incorporates neoprene strip panels that allow the vest to sit comfortably when dry and when wet provides extra grip to hold the impact vest secure and in place to prevent rising.

COMP VEST FEATURES:

- Side zipper easy entry and exit.
- Liquid Force "Inside Grip" technology.
- Seat and waist harness compatible.
- Low profile ergonomic flotation.

LF
EXCLUSIVE
TECHNOLOGY!

BACK VIEW

LUXURY VEST

Completely redesigned for 2011 the Liquid Force Luxury impact vest is the most comfortable, maneuverable and conforming impact vest ever produced for kiting. Incorporating technology from popular wake vest and big wave surfing impact vest design, the LF impact vest utilizes an ultra low profile shape offering maximum impact protection and added flotation specific to kiteboarding. The unique placement of the flotation aids in keeping the rider upright and is designed to be integrated with a kiteboarding waist or seat harness. Another Liquid Force exclusive technology is the LF Inside Grip. This design feature incorporates neoprene strip panels that allow the vest to sit comfortably when dry and when wet provides extra grip to hold the impact vest secure and in place to prevent rising.

LUXURY VEST FEATURES:

- Side zipper easy entry and exit.
- Liquid Force "Inside Grip" technology.
- Seat and waist harness compatible.
- Ergonomic flotation design for comfort, mobility and maximum float.

BACK VIEW

WHEELED TRAVELER

Perfect for serious riders looking to bring all their gear to take to the launch in one bag. It features a heavy duty design, padded center divider, durable pull handles, bombproof zippers, padded shoulder strap, and convenient storage pockets. Will hold up to 2 boards well as your towel, trunks, bars and lines, etc.... Comes with heavy duty wheels for easy strain free transportation.

DAY TRIPPER DLX

The Day Tripper DLX has a heavy-duty padded bottom, a lightweight design, a padded shoulder strap and comfortably fits one board with straps and pads or bindings. Great for lightweight day travel.

EDGE PROTECTOR

Keep your precious cargo safe and sound. The LF Edge Protector is the perfect safety to keep your ride looking nice and in tiptop shape.

WEEKENDER

The Weekender bag holds all the necessary equipment for the weekend warrior. The lightweight padded design comes with a padded center divider, as well as PVC durable pull handles, heavy duty zippers, a padded shoulder strap, and holds up to 2 boards and bindings.

BUSHWOOD GOLF

In this day and age of airlines charging you for every little thing, you need all the help that you can get. We can't guarantee that your board will make it on for free, but in our test runs, we had much better luck with this bag than with standard board bags. Room for 2 boards and all of your essential gear.

SPLIT TRAVELER

This Heavy duty lightweight bag is the ultimate travel companion. Equipped with convenient storage pockets, low friction precision machined bearings with high impact wheels, collapsible handle for easy towing, newly added PVC in high impact areas and more space than ever.

LAPTOP BAG

Put your computer in a sheath of love. Not only holds your life that is on your computer, but also holds other key essentials to get you through the day!

BACKPACK

The Liquid Force backpack is a perfect for hauling your swag for a weekend trip or just the town. It features a cooler compartment, a super soft zipper pouch for your shades and has a cross strap in front. This will become your everyday bag from now on!

MESSENGER BAG

Perfect bag for all your daily needs! Throw your computer in there with an extra set of jeans to match your fixie...all you friends will wish they had this bag!

MESH WET BAG

Do yourself a favor and eliminate those pesky odors and soggy clothes. Grab the mesh gear bag. It has lots of mesh for ventilation and drains to keep its contents fresh and dry.

REFRESHER

6 pack and nothing to do? Well, we have a 12 pack version too! The Refresher is the best way to hit a new spot and make friends. Load up the ice, put in the beverage of choice and hit it! Available in both 6 and 12 versions.

2011 APPAREL

Liquid Force apparel is deeply inspired by our international team of riders. We are dedicated to making everything from the best board shorts, T-shirts, casual clothing and accessories with the finest and most technical materials to define your style.
